Suppliers of Quality

Aglime

Geelong's only Aglime quarry,
Batesford Quarry, has been supplying
innovative lime products to suit the needs of the
agricultural community since 2001.

AGLIME is a natural ground coral based, friable
limestone that is produced with both quality
and value in mind. It is ground finely to insure a
good result in varying soil types and is suitable
for both incorporation and top dressing for
cropping, pastures and horticulture.

AGLIME is easy to tip and spread, which makes
handling a breeze and ensures a good coverage.

Typical Aglime analysis

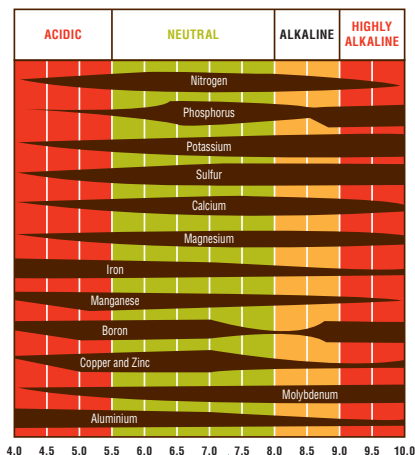

Moisture	10%
Calcium	32%
Calcium Carbonate	80%
Magnesium	<1%
Magnesium Carbonate	2%
Neutralising value	80%
% > 1mm	9%

Why use Aglime

- Corrects soil Acidification
- Reduces Aluminum and Manganese toxins
- Improves fertilizer efficiency
- Improves livestock health
- Enhances pasture productivity
- Helps to ensure the sustainability of your land
